

Session Summary

Withdrawal Pipeline Debug & Ship — May 9–10, 2026

OUTCOME

STATUS	SHIPPED — end-to-end withdrawal live on mainnet
WITHDRAW ID	260510081400063
AMOUNT	19 USDC → wallet 0xd9f7b3273b504e1473c3faba6341299d0ec9b449 (Arbitrum)
NONCE	1
COMMIT	9d83e49 — pushed to StephenBorst/nexus-4421
WORKER VER	06aff7f8-88a4-4f14-b595-95791ff6be98

ROOT CAUSE — verifyingContract

The Orderly EIP-712 withdrawal signature requires a specific **verifyingContract** address in both the signing domain and the POST body. Two wrong addresses were tried before finding the correct one buried in @orderly.network/core.

ADDRESS	SOURCE	RESULT
0xCcCCccccCCCCcCCCCCcCcCcCCCCcCccccc ccc	Off-chain EVM placeholder	Code 29 ✗
0x8794E7260517B1766fc7b55cAfcd56e6bf086 00e	Dev env (env === 'dev' branch in SDK)	Code 29 ✗
0x6F7a338F2aA472838dEFD3283eB360d4Dff5D 203	mainnetVerifyAddress in @orderly.network/core — networkId === 'mainnet'	SUCCESS ■

How to find it: `grep -n "mainnetVerifyAddress" node_modules/@orderly.network/core/dist/index.js → line 2939`

BUGS FIXED THIS SESSION

Bug #1 — Worker crash — Cloudflare 1101

bankr-withdraw handler referenced body variable without calling request.json() first → ReferenceError on first line. Fixed: added try/catch around request.json() at top of handler.

Bug #2 — No try/catch in handler

Any throw inside the handler returned Cloudflare's HTML 500 page instead of a JSON error. Fixed: wrapped full handler logic in try/catch returning structured JSON error.

Bug #3 — No top-level try/catch

Crashes in routing code outside the handler still produced Cloudflare HTML. Fixed: top-level try/catch around the entire fetch() body.

Bug #4 — Missing verifyingContract in POST body

Incorrectly removed verifyingContract from Orderly POST body during debug, causing -1005 'verifyingContract must not be blank'. Restored.

Bug #5 — Wrong verifyingContract (root cause)

Two wrong SDK addresses tried (see table above). Correct address: 0x6F7a338F2aA472838dEFD3283eB360d4Dff5D203.

Bug #6 — amount typed as String in EIP-712

uint256 amount was being passed as String(amountUnits). Must be a number. Fixed.

Bug #7 — POSITIONAL_TP_SL flat fields

SL/TP orders used flat tp_trigger_price/sl_trigger_price fields. Orderly requires child_orders array with CLOSE_POSITION type. Fixed in both /trade and /set-sl-tp endpoints. Close side derived from position direction (LONG→SELL, SHORT→BUY).

Bug #8 — Bankr loading GUIDE.md instead of SKILL.md

Bankr installs the first .md file alphabetically. GUIDE.md (G < S) was being loaded as the skill. Fixed: renamed GUIDE.md → SETUP_GUIDE.md so SKILL.md loads correctly.

■ KEY LESSON — Two Different 1101 Errors

CLOUDFLARE 1101	Worker JavaScript exception. Response is an HTML page with Cloudflare branding. Check Content-Type: text/html = CF crash, not Orderly error.
ORDERLY 1101	Invalid EIP-712 signature. Response is JSON: { success: false, code: 1101, message: '...' }. Completely different problem.
DIAGNOSIS TIP	Always check Content-Type header first. If it's text/html, the Worker crashed before it could call Orderly at all.

■ INFRA & DEPLOY NOTES

WORKER DEPLOY	GH Actions only deploys Cloudflare Pages (frontend). Worker requires npx wrangler deploy from workers/nexus-lab-api/. CI now updated to auto-deploy Worker on every push (deploy.yml patched in GitHub UI).
---------------	---

GIT LOCK FILES	Sandbox can't delete .git/*.lock on NTFS mount. Workaround: git clone to /tmp/nexus-deploy, make changes, push via PAT.
PAT SCOPE	PAT lacked 'workflow' scope — couldn't push deploy.yml changes via API. User edited deploy.yml directly in GitHub UI to add Worker deploy step.
WRANGLER	<code>npx wrangler deploy</code> (not <code>wrangler-action</code>) — direct invocation shows real errors.
UNSETTLED USDC	0.387 USDC locked as cost_position (unsettled fees/funding from test trades). Not withdrawable until settled — clears automatically within hours.

■ ORDERLY WITHDRAWAL — CORRECT FORMAT

EIP-712 Domain:

```
{ name: 'Orderly', version: '1', chainId: 42161, verifyingContract:
'0x6F7a338F2aA472838dEFD3283eB360d4Dff5D203' }
```

Message fields:

brokerId, chainId, receiver (lowercase), token: 'USDC', amount (uint256 number — NOT string), withdrawNonce (number), timestamp (ms)

POST /v1/withdraw_request body:

```
{ message, signature, userAddress, verifyingContract: '0x6F7a338F2aA472838dEFD3283eB360d4Dff5D203' }
```

Withdraw only free_collateral — not total account value. Unsettled cost_position is locked margin even with no open position.

■ CURRENT STATE

COMPONENT	STATUS	NOTES
Bankr Skill loading	■ WORKING	SKILL.md loads correctly (GUIDE→SETUP_GUIDE rename)
Orderly trading (/trade)	■ WORKING	POSITIONAL_TP_SL child_orders format correct
SL/TP management (/set-sl-tp)	■ WORKING	Close side derived from position qty sign
Withdrawal (/proxy/bankr-withdraw)	■ WORKING	First mainnet withdrawal confirmed
Worker error handling	■ WORKING	Top-level + handler-level try/catch, JSON errors always
CI auto-deploy (Worker)	■ WORKING	deploy.yml now includes wrangler deploy step
Unsettled 0.387 USDC	■ PENDING	Clears automatically — no action needed
